“making a better future for your trees... and the environment”

## Mosquito Control:

- Useable Properties, Healthier Properties, Properties with Higher Values

Mosquitoes have always been a part of Fort Wayne, but as suburban development expands, more breeding sites are created. To effectively control these pests, one needs to understand the mosquito reality.

In Fort Wayne, *Culex pipiens*, the most aggressive native mosquito, is the common nuisance. This pest breeds in small containers and in the knots and holes of trees. Nearly every homestead has those features, making them appealing to this mosquito.

There are two general ways to provide relief from these summer pests: disrupt the egg laying/larva stage or kill the flying adults and buffer the area(s) of concern. Weekly emptying of bird baths and watering cans will make a difference in the mosquito populations that are attacking you and your family. For water features and drains which can't be emptied, use of larvi-cides is also recommended. Clearly, trees can't be emptied! Fogging is the solution for these hidden mosquito lairs.

For almost 10 years, TreeMasters has offered thermal fogging to selected clients who are having mosquito problems. Now, it is available to all! Restore the enjoyment of your lawn and landscape. Don't let the mosquitoes cheat you out of its use and enjoyment.

### All applications utilize low-risk products:

- > There is no threat to plants or birds in the application.
- > Reentry to the site is permitted within minutes of the application.

**Visit our website or call us for more information.**

#### **IMMEDIATE TARGETED RELIEF**

Planning a special event? Whole property fogging utilizing a thermal fog will provide site-wide knock-down of the mosquitoes and comprehensive relief for 48+ hours.

This treatment can also provide relief for individual homesteads or even whole parks!

#### **AUTOMATIC SYSTEMS, DAILY RELIEF**

Automatic control systems provide daily control for your deck, patio, pool or entryways. Engineered specifically for your property, only low-risk pesticides are used: the same ones that are put in dog shampoo and tick and flea collars.

Also available is an all-natural, herb oil extract, which has an EPA “Exemption from Tolerance”.
